

Success Story

Austal Ships

www.austal.com

Client Information

Today, Austal is the world's largest builder of fast ferries and leads the world in the design and construction of customised aluminium commercial and defence vessels.

In 2001, Austal became the first company to supply the US military with a high speed vessel, the Theatre Support Vessel (TSV).

Industry

Manufacturing
Commercial and Defense

Geography

Austal's Head Office is in Western Australia and has major ship yards in Tasmania and the USA.

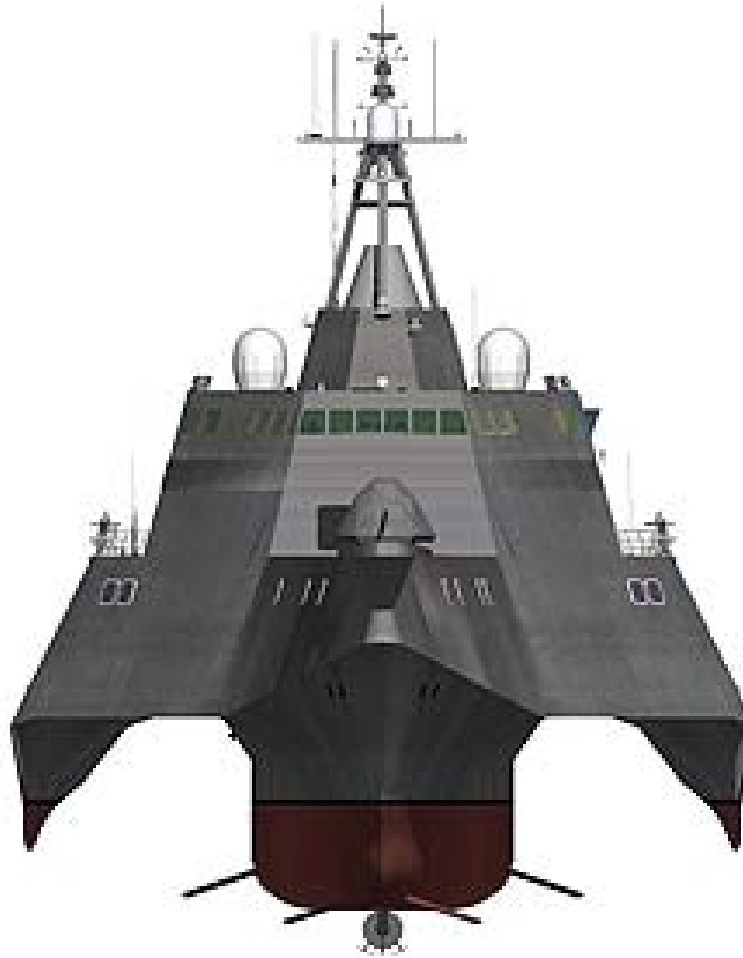

Implementation Highlights

- Interviews with management organisation wide identifying critical information assets and security controls
- Maturity assessment completed against ISO 17799:2006
- Pragmatic recommendations to address issues and balanced improvements that don't hinder "getting on with business"

Business Benefits

- Comfort and assurance in the knowledge of understanding the information security posture of the organisation in comparison with international best practice
- Greater protection of Intellectual Property

Information Security Review - Protection for Information Assets

Engagement Summary

Blue Zoo's team adopted a highly collaborative approach to assessing the needs of Austal, when assessing IT security it is vital to establish the business and wider IT environment that IT security fits within. It is a common mistake to over or under-engineer IT security as a consequence of not understanding these contexts.

Blue Zoo leveraged COBIT© and ISO 17799:2006 Information Security Management to conduct a review of Information Security, the outcome being a detailed report with practical recommendations for improvement.
